

Threat Management CyGuard 2.0

Rapid detection and response to cyber attacks

Today, attackers have the unfair advantage. You must be able to address the many thousands of attack vectors an attacker might use to infiltrate your organization. You must be able to detect attacks that have never been seen before and you must do it in a matter of minutes. You have done all you can to deploy the best preventative measures, you've conducted the penetration tests and risk assessments, but you still don't feel completely covered. CyGuard 2.0 can be your eyes and ears, watching over all of your systems, alerting you to verified threats to your business.

UNPARALLELED VISIBILITY

CyGuard™ maximizes your IT investments by consolidating data from across your enterprise into a single easy to understand view where trends and patterns can be analyzed and threats identified.

ADVANCED ANALYSIS

CyGuard™ monitors behavior across your environment to proactively identify anomalies that could be indicators of compromise. Using an advanced analysis engine, we quickly identify real threats to your business. This data and business context-driven approach means when you receive a notification, you know it is a credible and urgent threat.

SITUATIONAL AWARENESS

Events can take on a different meaning when they are compared to situations unique to your environment. For that reason, Digital Hands uses advanced awareness techniques to ensure we have a deep understanding of your business.

Actionable Intelligence

Why CyGuard?

Minimize the impact of cyber attacks with rapid detection and response.

Derive full value out of your security investments by bringing the data into a single pane of glass for easy analysis.

Focus your efforts on validated critical threats to your business.

Simplify and maintain regulatory compliance

SECURITY OPERATIONS

Digital Hands cyber security operations team provides a critical bridge to drive rapid response to cyber threats. Our expert team monitors your environment 24 x7 and utilizes operational response best practices to ensure your business can rapidly take action to address threats as soon as they are identified.

THREAT INTELLIGENCE

CyGuard™ brings together analysis and context including cross-correlation intelligence from businesses enrolled in our service and over 300 public and private threat information sources.
